Quote Request Checklist

Eight things that let us price your project accurately the first time. You don't need all of them to get started — but every one you can answer removes a round of questions.

WE ACCEPT

**STEP · STP · STL · DXF · DWG ·
PDF · JPG · JPEG · PNG · HEIC**

QUOTES ARE GOOD FOR

30 days from the date issued

MINIMUM ORDER

\$25 per order

1 What you're sending

- ☐ **Your current files — with the revision named**
The single most common cause of a wrong part is building the wrong version. Put the revision in the filename.
- ☐ **A drawing, if you have one**
The model says what shape. The drawing says what actually matters — which dimensions are critical, what finish, what material.
- ☐ **Photos or a sketch, if you don't have CAD**
You can start from an idea, a sketch, a photograph, or a physical part. We'll tell you what design work is needed before anything is made.

2 What the part has to do

- ☐ **What it's for**
A bracket that holds a camera and a bracket that holds a person are different jobs. Tell us the use and we'll flag anything that worries us.
- ☐ **Material — or the properties you need**
If you don't know the material, describe the environment: heat, chemicals, sunlight, load, food contact. We'll suggest options.
- ☐ **Critical dimensions or tolerances**
Mark the few dimensions that control fit or function. Tolerancing everything costs money and rarely helps.
- ☐ **Finish and color**
Cosmetic requirements are a separate cost from functional ones. Say if the part will be seen, handled, or photographed.

3 How many, and when

- ☐ **Quantity now — and quantity later**
Ten now and a thousand next year is a different plan from ten and done. Tell us both; it can change the process we recommend.
- ☐ **Prototype or production**
A prototype is for learning something. A production run is for repeating something. They're priced and made differently.

☐ **The date you need it**

A date with a reason attached beats “as soon as possible”. If you’re presenting on the 14th, say so — we can plan around it.

Uploading a file isn’t a commitment

Sending files starts a review, not an order. A person confirms whether we can make it, what it costs, and when — before anything is agreed.

You’ll type all of this into the quote form

Nothing here needs printing or sending back. This page exists so you can gather the answers before you sit down at the form, not so you can fill it in on paper.

4 Have the answers ready

☐ **What you’re making, and what it has to do**

The quote form asks for this in your own words. A sentence or two is plenty — what it is, what it attaches to, and what it can’t fail at.

☐ **Material, or the environment it lives in**

If you don’t know the material, describe what it has to survive: heat, chemicals, sunlight, load, food contact. We’ll suggest options.

☐ **Quantity now, and quantity later**

Both numbers. Ten now and a thousand next year is a different plan from ten and done, and it can change the process we recommend.

☐ **Finish and color**

Cosmetic requirements are a separate cost from functional ones. Say whether the part will be seen, handled, or photographed.

☐ **The date you need it, and what happens if it slips**

A date with a reason attached beats “as soon as possible”. If you’re presenting on the 14th, say so — we can plan around it.

☐ **Prototype or production**

A prototype is for learning something. A production run is for repeating something. They’re priced and made differently.

☐ **Anything that worries you about the part**

The feature you think might be difficult usually is. Telling us early is cheaper than finding out after it’s cut.
